Отчет по лабораторной работе №5-6 «Разработка бота на основе конечного автомата для Telegram с использованием языка Python»

Выполнил: Ким Алексей Максимович ИУ5-32Б

Дата: 20.12.2021

Постановка задачи:

Разработайте бота для Telegram. Бот должен реализовывать конечный автомат из трех состояний.

Код программы:

Sub.py

```
import sqlite3
class sub:
       self.connection = sqlite3.connect(database)
      self.cursor = self.connection.cursor()
   def get_subscriptions(self, status_=_True):
          return self.cursor.execute("SELECT * FROM `subscriptions` WHERE `status` = ?", (status,)).fetchall()
   def subscriber_exists(self, user_id):
          result = self.cursor.execute('SELECT * FROM `subscriptions` WHERE `user_id` = ?', (user_id,)).fetchall()
           return bool(len(result))
   def subscriber_check(self, user_id):
          result = self.cursor.execute('SELECT `status` FROM `subscriptions` WHERE `user_id` = ?', (user_id,)).fetchall()
   def add_subscriber(self, user_id, status):
           return self.cursor.execute("INSERT INTO `subscriptions` (`user_id`, `status`) VALUES(?,?)", (user_id_status))
   def update_subscription(self, user_id, status):
          return self.cursor.execute("UPDATE `subscriptions` SET `status` = ? WHERE `user_id` = ?", (status, user_id))
      self.connection.close()
```

Translate.py

```
